Project Definition

- ▶ The Online Auction House System is a web-based application developed using the Django framework that enables users to buy and sell products through online auctions.
- ▶ Sellers can list items for auction, and buyers can place bids in real time. The system automatically manages bidding processes, auction duration, and winner declaration, providing a secure, efficient, and transparent auction platform.

Objective of the Project

- ▶ To design and develop an online auction platform using Django
- ▶ To provide a secure and user-friendly system for online bidding
- ▶ To allow sellers to list products with auction details
- ▶ To enable buyers to place competitive bids online
- ▶ To automate auction management and winner selection
- ▶ To ensure data integrity and security using Django's built-in features

Scope of the Project

- ▶ User registration, login, and authentication
- ▶ Product listing with images and descriptions
- ▶ Auction scheduling (start time and end time)
- ▶ Real-time bidding system
- ▶ Automatic auction closure and winner declaration
- ▶ Admin dashboard for managing users, auctions, and bids

Existing System

- ▶ Traditional auctions require physical presence
- ▶ Limited number of participants
- ▶ Manual bid tracking and record keeping
- ▶ Time-consuming and expensive process

Proposed System

- ▶ Fully online auction system accessible from anywhere
- ▶ Automated bidding and auction monitoring
- ▶ Secure authentication using Django's user management
- ▶ Real-time updates on bids
- ▶ Transparent auction process
- ▶ Centralized database for easy data management

Tools and Technologies Used

Front End	Back End	Server & Environment
HTML	Django	Python Virtual Environment
CSS	Python	Django Development Server
JavaScript	SQLite	Git – Version control (optional)
	Django Authentication System – User management	

Thank You
